

Introduction

Welcome!

Dear customers, first of all we would like to thank you for choosing Ehya Website Template! We truly hope that Ehya will serve you well, and that it will live up to your expectations.

We hope you will enjoy using Ehya template easy to navigate and user-friendly layout as well as developer-friendly code. Furthermore, a lot of resources have been employed and many options have been added just to make sure that our valued customers will be satisfied with their purchase.

Updates

In order to keep up with the fast paced evolution of web design trends, we always try to release new updates on continuous basis. Our goal with each update is to impress our customers and to put huge smile on their faces.

We would like to bring to your attention that once you purchase Ehya Website Template, you become eligible for a lifetime entitlement to download updates for FREE! On the other hand, we regret to inform you that license upgrade is not available. If you wish to upgrade your license, a new purchase must be made.

Current updated release is v1.0.0 which offers several new plugins, plenty of new designs options, Bootstrap 4, fully SASS support and much more. All changes can be found in the changelog section. Our updates do not stop there as many more new amazing features are surely coming soon in the next updates. Thank you always for using Ehya Website Template and for being a vital part of its success.

Support

In Ehya we believe that support is a crucial aspect of any successful product. Therefore, we try our very best to offer the most excellent support, and we always try everything within our power to assist our valued customers. It is worth to mention that our support mainly covers all design issues that one might encounter in addition to frontend-related issues as long as it is not complete customized work.

If you have any questions, please feel free to contact us from [Designspace](#) and we will do our best to get back to you within 24 hours. Sometimes it might take a bit longer, but we will do our best not to keep you waiting longer than 48 hours.

File Structures

Download Package

The download package includes three folders dist, documentation and src folders. All the live demo examples are located inside the **dist** folder. The **dist** folder is a main source folder where all assets files are located.

DIST Folder

Ehya comes with 3 category for first release packages such as "Apps", "Company", and "Services" packages.

dist Folder Structures

- **assets** (all source files such as css, sass, js, images, plugins etc.)
- **apps** (desktop page)
- **company** (4 pages - about page, contact page, faq page, pricing page)
- **services** (2 pages - insurance page, rent page)
- **blog** (3 pages - blog page alt-1, blog page alt-2, article page)
- **landing** (8 pages - about us page alt-2, pricing page alt-2, agency landing page, architecture landing page, cosmetics landing page, personal-site landing page, real estate landing page, travel landing page)
- **index.html** (Intro page)

assets Folder Structures

- **css** (main.css and custom.css and third party)
- **js** (index.js, and third party)
- **fonts** (include hkgrotest font and open sans font)
- **images** (logos, patterns, custom icons and others)

CSS (SASS) Structure

CSS Architecture

Every STRONG project needs some file structure and organization. For that, already exist a lot of methodologies and solutions such as BEM, ITCSS, OOCSS, Atomic CSS and others. These methodologies help to maintain the project easily and scalably. For example, BEM is used by Google, BBC and many other large companies. Also, the authors of the mentioned methodologies are very experienced people in this field.

Each methodology has its own file structure, strict rules, recommendations and even coding structure. However, it is very hard to pick up only one of them and fully follow in our project - Ehya. For that reason, we have picked best optimal practices and features from some popular methodologies and implemented into Ehya. At the result, we came up with our own new file structure and methodology.

CSS (SASS) File Structure

Here is how Ehya CSS (SASS) file structure looks like:

- Abstract **abstract**
 - Variables
 - Breakpoints
- Components **components**
 - Card
 - Footer
 - Form
 - General
 - Header
 - Icons
 - List
 - Pricing
- Pages **pages**
 - Apps
 - Desktop
 - Mobile
 - Services
 - Insurance
 - Rent
 - Conference
 - Software-Library
 - Company
 - About
 - Contact

- FAQ
- Pricing
- Career
- Career Detail
- Account
 - Sign-in
 - Sign-up
- Landing
 - About Us
 - Pricing
 - Agency
 - Architecture
 - Cosmetics
 - Personal-site
 - Real Estate
 - Travel
- Utility **utility**
 - We have a 67 utility values
- vendors **vendors**
 - Overwrite codes of the third party plugins
- **main.scss**

Starter Template

Start with this basic HTML starter template, or modify any included layout pages. Be sure to have your pages set up with the latest design and development standards. That means using an HTML5 doctype and including a viewport meta tag for proper responsive behaviors. Put it all together and your pages should look like this:

```
<!doctype html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport"
    content="width=device-width, user-scalable=no, initial-scale=1.0, maximum-scale=1.0,
    minimum-scale=1.0">
  <meta http-equiv="X-UA-Compatible" content="ie=edge">
  <title>Title</title>
  <link rel="stylesheet" href="../assets/css/bootstrap.min.css">
  <link rel="stylesheet" href="../assets/css/fortawesome/all.min.css">
  <link rel="stylesheet" href="../assets/css/bootstrap-select.min.css">
```

```
<link rel="stylesheet" href="../assets/css/main.css">
<link rel="stylesheet" href="../assets/css/animate.css">
</head>
<body class="">

<!--start:main-->
<main>
  <h1>Hello, World!</h1>
</main>
<!--end:main-->

<!--start:javascript-->
<script src="../assets/js/jquery.min.js"></script>
<script src="../assets/js/popper.min.js"></script>
<script src="../assets/js/bootstrap.min.js"></script>
<script src="../assets/js/bootstrap-select.min.js"></script>
<script src="../assets/js/wow.min.js"></script>
<script src="../assets/js/index.js"></script>
<!--end:javascript-->

</body>
</html>
```

That's all you need for overall page requirements. Info!

In addition, you may use **Blank Page** example page where header and footer are linked.
